Abstract of the Disclosure

An image division unit divides an original image. Each divided image is assigned an identifier, and additional information for generating an image corresponding to each divided image. An image distribution unit transmits the divided image and a corresponding image reference drawing to a generation terminal device. The image generation terminal device displays the reference drawing, generates an image corresponding to the received divided image, and transmit the generated image to an image distribution device. The image generation image by integrating unit generates an entire plurality image images received from а οf generation terminal devices.
